

Using the `\setquestionstring` allows the default ‘Q’ to be replaced by a different, possibly language independent, alternative.

Usage:

`\setquestionstring{⟨string⟩}`

First we start a question with the default question string.

Q 1

- (i) Lorem ipsum dolor sit amet, consectetur adipiscing elit.

Next we’ll use `\setquestionstring{Question}` to change the label and start another question.

Question 2

- (i) Lorem ipsum dolor sit amet, consectetur adipiscing elit.

If question strings are too long, we get an effect like the following, using `\setquestionstring{Long Question}`:

g Question 3

- (i) Lorem ipsum dolor sit amet, consectetur adipiscing elit.

The solution is to use an additional, but optional parameter, to specify alignment before the string. So we now have:

`\setquestionstring[⟨l⟩ or ⟨r⟩]{⟨string⟩}`

Where the optional parameter indicates whether to align to the left or right end of the string: default is right.

Long Question 4

- (i) Lorem ipsum dolor sit amet, consectetur adipiscing elit.

Und für unsere deutschen Freunde.

Übersetzung 5

- (i) Lorem ipsum dolor sit amet, consectetur adipiscing elit.

Ac yn olaf, yn y Gymraeg mae gennym ni.

Cwestiwn 6

- (i)      Lorem ipsum dolor sit amet, consectetur adipiscing elit.

Ardderchog, da iawn! Partïo ymlaen bois!
